

Business Requirements Document (BRD)

Healthy Homez - On-Demand Home Services Platform

Document Version: 1.0

Date: January 24, 2026

Prepared For: Development Team

Project Type: Mobile Application (iOS & Android)

Table of Contents

1. Executive Summary
2. Project Overview
3. Scope and Objectives
4. Stakeholder Identification
5. Functional Requirements
6. Non-Functional Requirements
7. User Interface Requirements
8. Security and Compliance
9. Constraints and Assumptions
- 10.Success Criteria
- 11.Appendices

1. Executive Summary

Healthy Homez is a dual-interface mobile application platform designed to connect customers seeking home cleaning and maintenance services with skilled workers. The platform operates on an on-demand and subscription-based model, similar to Urban Company and Pronto, focusing on maid services, deep cleaning, and specialized home maintenance tasks.

Key Features:

- Customer-facing mobile application for booking and managing services
 - Worker-facing mobile application for task management and earnings tracking
 - Admin control panel for operational oversight
 - Automated worker assignment and backup management system
 - Real-time tracking and QR-based verification
 - Flexible pricing models (time-based and fixed-price)
-

2. Project Overview

2.1 Business Context

Healthy Homez addresses the growing demand for reliable, on-demand home services by providing a technology-enabled platform that ensures quality service delivery, transparent pricing, and efficient worker management.

2.2 Target Market

- **Primary:** Urban households requiring regular and on-demand cleaning services
- **Secondary:** Working professionals, families, and elderly individuals needing home maintenance

2.3 Business Model

- Commission-based revenue from service bookings
 - Subscription plans for regular customers
 - Premium service charges for specialized cleaning tasks
-

3. Scope and Objectives

3.1 In Scope

- Customer mobile application (iOS and Android)
- Worker mobile application (iOS and Android)
- Backend admin control system

- Payment gateway integration
- Notification system (SMS, WhatsApp, Push notifications)
- QR code-based work verification
- Automated worker assignment algorithm
- Geolocation and navigation services

3.2 Out of Scope (Phase 1)

- Web-based customer portal
- International operations
- Additional service categories beyond home cleaning
- Worker training management system

3.3 Objectives

- Provide seamless booking experience for customers
- Ensure 95%+ service full-fillment rate
- Minimize customer wait time through efficient worker allocation
- Maintain transparent pricing and time tracking
- Enable workers to maximize earnings through optimized scheduling

4. Stakeholder Identification

4.1 Primary Stakeholders

- **Customers:** End-users booking services
- **Workers:** Service providers fulfilling bookings
- **Admin Team:** Operations, customer support, and management
- **Business Owners:** Decision-makers and investors

4.2 Secondary Stakeholders

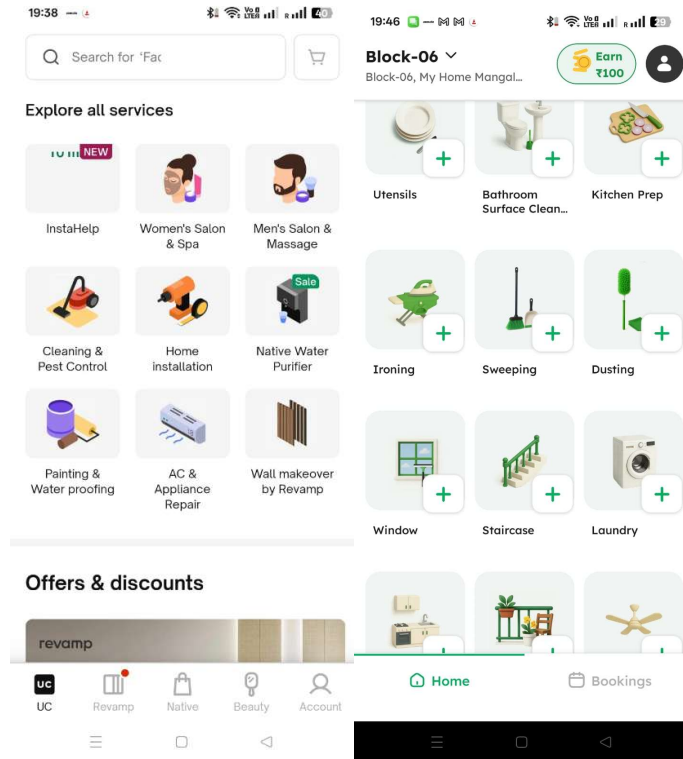

- Payment gateway providers
 - SMS/notification service providers
 - Development and QA teams
 - Marketing and customer acquisition teams
-

5. Functional Requirements

5.1 Customer-Side Application

5.1.1 Service Booking Module

📱 SCREENSHOT REFERENCE: (URBAN COMPANY & PRONTO)

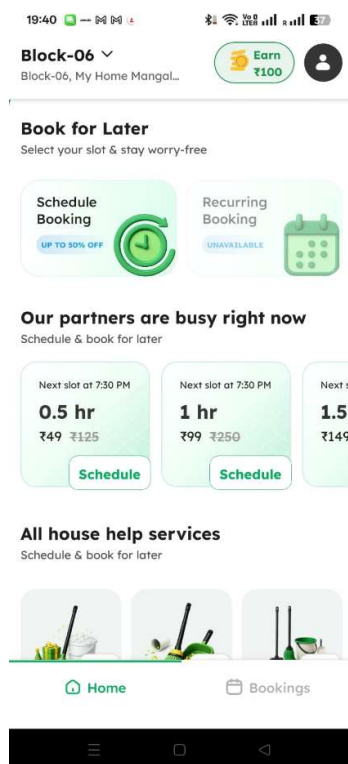

REQ-C-001: Service Menu

- **Description:** Customers must be able to browse and select from available service categories
- **Service Categories:**
 - **Insta Maid Service:** On-demand maid service (minimum 1 hour booking)
 - **Monthly Maid Subscription:** Recurring maid service (minimum 1 hour per session)
 - **Deep Cleaning Services:**
 - Full house deep cleaning (size-based pricing)
 - Room-specific deep cleaning
 - Kitchen deep cleaning
 - Bathroom deep cleaning
 - **Specialized Fixed-Price Services:**

- Basic washroom cleaning
- Washroom deep cleaning
- Fan cleaning
- Window cleaning
- Sofa cleaning
- Carpet cleaning
- Balcony cleaning

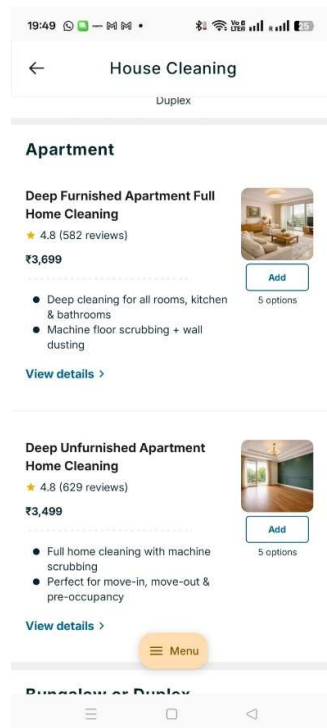

REQ-C-002: Time-Based Service Booking (Insta/Monthly Maid)

📱 SCREENSHOT REFERENCES: (PRONTO)

REQ-C-003: Fixed-Price Service Booking (Deep Cleaning & Specialized)

SCREENSHOT REFERENCE (HOME TRIANGLE)

REQ-C-004: Monthly Subscription Management

- *Subscription/monthly plan selection screen*
- *Recurring schedule setup interface*
- *Frequency selector (daily/weekly/bi-weekly)*
- *Subscription management dashboard*
- *Pause/modify subscription options*
- Recurring booking setup with customizable:
 - Frequency (daily, weekly, bi-weekly, monthly)
 - Preferred time slots
 - Specific days of the week
 - Duration per session
- Subscription modification options
- Pause/resume subscription feature
- Auto-renewal settings

REQ-C-005: Customer Preferences

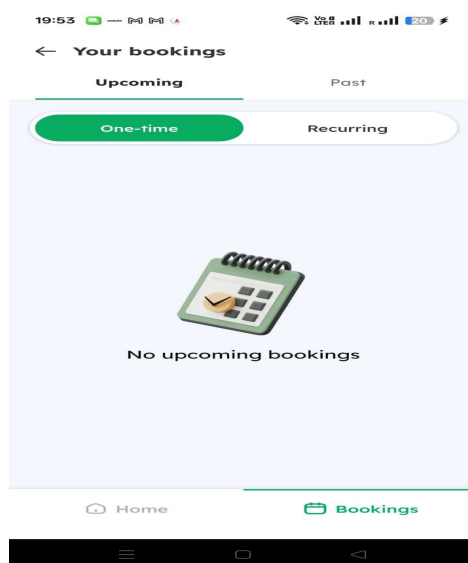

- *Preference settings page*
- *Worker gender preference selection*
- *Preferred professional/worker selection*
- *Special instructions text field*
- *Service customization options*
- Service-specific preferences
- Worker preferences (save preferred workers)
- Gender preference for assigned workers
- Language preference
- Special instructions field (500 character limit)
- Preference storage for future bookings
- Subject to availability disclaimer

REQ-C-006: Smart Recommendations

- Service suggestions based on booking history
- Frequency-based reminders
- Seasonal service recommendations
- Availability-based suggestions

5.1.2 Booking Management

SCREENSHOT REFERENCE: (PRONTO)

- *Booking dashboard with tabs (Ongoing/Upcoming/Past)*
- *Booking card layout with service details*
- *Status indicators (Confirmed, In Progress, Completed)*
- *Quick action buttons (Reschedule, Cancel, Contact)*

REQ-C-007: Booking Dashboard

- Three primary views:
 - **Current Bookings:** Active/ongoing services
 - **Upcoming Bookings:** Scheduled future services
 - **Past Bookings:** Completed service history
- Booking details display:
 - Service type
 - Date and time
 - Assigned worker information
 - Estimated cost
 - Booking status

REQ-C-008: Worker Assignment Notification

- *Worker assignment notification popup*
- *Professional/worker profile card (photo, name, rating, reviews)*
- *ETA display and live tracking button*
- *Worker details page with past work samples*
- *Contact professional button/options*
- Push notification upon worker assignment
- Worker profile display:
 - Name and photo
 - Rating and review summary
 - Specialization/skills
 - Contact option (app-based calling)
- ETA display for worker arrival

REQ-C-009: Booking Modifications

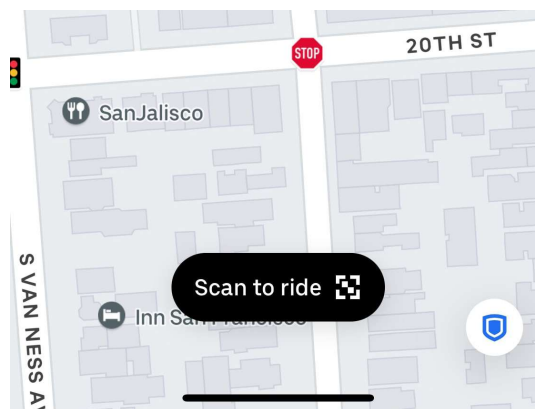

- **Cancellation:**
 - Free cancellation up to 1 hour before scheduled time
 - Cancellation charges apply within 1-hour window
 - Immediate refund processing for eligible cancellations
- **Rescheduling:**
 - Free rescheduling up to 1 hour before scheduled time
 - Subject to worker availability
 - Automatic reassignment if original worker unavailable

REQ-C-010: Change Notifications

- Multi-channel notifications for:
 - Worker reassignment
 - Schedule changes
 - Worker unavailability
 - Delay notifications
- Notification channels: (whichever is cost effective)
 - In-app push notifications
 - SMS notifications
 - WhatsApp notifications (cost-effective priority)
- Customer consent options for each notification type

5.1.3 Service Execution & Verification

SCREENSHOT REFERENCE (UBER)

QR code scanner interface (uber)

- *Service start confirmation screen*
- *Live timer display during service*
- *Terms and conditions acceptance checkbox*
- *Service completion confirmation screen*

REQ-C-011: QR Code Verification System

- **Service Start:**
 - Customer scans worker's QR code
 - Terms and conditions acceptance
 - Worker job description acknowledgment
 - Timestamp recording (actual start time)
 - Automatic timer initiation
- **Service End:**
 - Customer scans unique end-of-service QR code
 - Total duration calculation
 - Overtime calculation if applicable
 - Service completion confirmation

REQ-C-012: Work Documentation

- Photo upload functionality:
 - Before work commences
 - During work progress
 - After work completion
- Photo storage limit: 10 photos per booking
- Optional notes/comments field
- Timestamp on all uploaded photos

REQ-C-013: Real-Time Tracking

- *Live tracking map with worker location pin*
- *Route visualization from worker to customer*
- *ETA countdown display*
- *Traffic-based delay notifications*
- *Map view during active service*

- Worker location tracking during active booking
- Estimated time of arrival (ETA)
- Route optimization display
- Traffic-based ETA updates

5.1.4 Payment Module

- *Payment summary screen with cost breakdown*
- *Multiple payment method options (UPI, Card, Wallet, Cash)*
- *Payment gateway integration interface*
- *Invoice/bill generation screen*
- *Payment success confirmation*

REQ-C-014: Payment Processing

- Payment gateway integration (Razorpay/Paytm/PhonePe)
- Payment options:
 - Credit/Debit cards
 - UPI
 - Digital wallets
 - Net banking
 - Cash on completion (with confirmation)
- Post-service payment for time-based services
- Pre-payment option for fixed-price services
- Automatic invoice generation

REQ-C-015: Pricing Transparency

- Detailed cost breakdown:
 - Base service charge
 - Overtime charges (if applicable)
 - Service taxes
 - Platform fee
 - Total amount
- Dynamic pricing display during booking
- Historical pricing for subscriptions

REQ-C-016: Payment History

- Transaction history with filters
- Downloadable invoices
- Payment method management
- Auto-pay setup for subscriptions

5.1.5 Rating & Review System

- *Star rating interface (1-5 stars)*
- *Category-wise rating sliders/options*
- *Written review text box*
- *Photo upload for review*
- *Rating submission confirmation*
- *Past reviews display format*

REQ-C-017: Service Rating

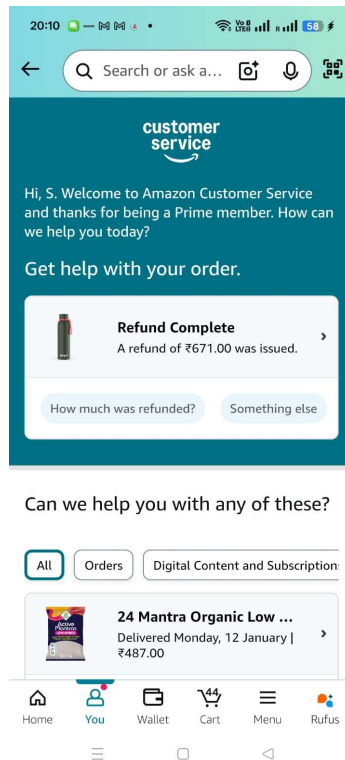

- Mandatory rating after service completion (1-5 stars)
- Category-wise rating:
 - Service quality
 - Worker professionalism
 - Timeliness
 - Overall satisfaction
- Written review option (500 character limit)
- Photo upload for review evidence

REQ-C-018: Worker Rating

- Separate worker rating (1-5 stars)
- Worker-specific feedback
- Flag inappropriate behavior option
- Anonymous review option

5.1.6 Customer Support

📱 SCREENSHOT REFERENCE (AMAZON):

- *Help/Support center homepage*
- *FAQ section with expandable questions*
- *Live chat interface*
- *Ticket/query submission form*
- *SOS/Emergency button placement*
- *Call support button with contact details*

REQ-C-019: Help & Support Module

- **In-App Support:**
 - Live chat support
 - FAQ section (searchable)
 - Video tutorials
 - Troubleshooting guides
- **Contact Options:**
 - Customer care phone number

- Email support
- Support ticket system
- **Emergency Features:**
 - SOS button for safety concerns
 - Emergency contact alert
 - Location sharing with emergency contacts
 - Direct connection to admin team

REQ-C-020: Query Resolution

- Ticket generation system
 - Status tracking for raised issues
 - Response time SLA: 24 hours
 - Escalation matrix for unresolved issues
 - Feedback on resolution
-

5.2 Worker-Side Application

- *Worker app home screen layout – can refer to UC Partner App, Zepto Delivery Partner App, etc.*
- *Online/Offline toggle button (prominent placement)*
- *Earnings dashboard summary*
- *Current task card*

5.2.1 Worker Profile & Availability

REQ-W-001: Worker Profile Management

- Profile information:
 - Personal details (name, photo, contact)
 - Skills and specializations
 - Service categories expertise
 - Experience level
 - Languages spoken
 - Identity verification documents
- Profile completion percentage
- Skill certification upload

REQ-W-002: Availability Toggle

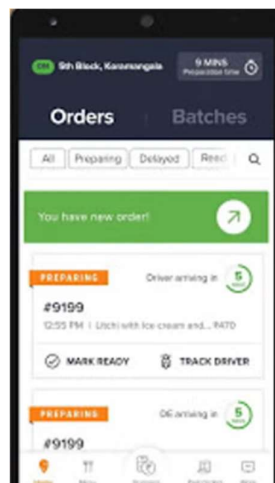

- Prominent availability toggle button
- Real-time status update to system
- Visual indicator of online/offline status
- Availability schedule setting:
 - Daily availability windows
 - Recurring availability patterns
 - Blackout dates

REQ-W-003: Skill-Based Work Assignment

- Automatic assignment based on:
 - Listed specializations
 - Service category expertise
 - Historical performance
 - Customer ratings
 - Proximity to customer location

5.2.2 Task Management

📱 SCREENSHOT REFERENCES: (SWIGGY PARTNER APP – older version)

- Task list view (upcoming orders/bookings)
- Task card layout with customer location and service details
- Accept/Reject task buttons
- Task details expandable view

- *Completed tasks history screen*

REQ-W-004: Task Dashboard

- Three primary sections:
 - **Current Ongoing Work:** Active service details
 - **Upcoming/Assigned Tasks:** Scheduled bookings
 - **Completed Tasks:** Historical work with earnings
- Task details display:
 - Customer first name and location
 - Service type and duration
 - Scheduled time
 - Expected earnings
 - Navigation option

REQ-W-005: Task Acceptance

- Auto-assignment for regular workers
- Manual acceptance for new assignments
- 5-minute acceptance window
- Auto-reassignment on timeout/rejection
- Rejection reason selection (limited rejections per day)

5.2.3 Service Execution

- *QR code display screen for customer to scan*
- *Photo upload interface (before/after work)*
- *Notes/remarks text field*
- *"Start Service" and "Complete Service" buttons*
- *Timer display during active work*

REQ-W-006: QR Code Generation

- Unique QR codes for each booking:
 - Service start QR code
 - Service end QR code
- QR code validity period
- Regeneration option if needed

REQ-W-007: Work Documentation

- Photo upload functionality:
 - Before work
 - Progress photos
 - After completion
- Mandatory completion photos for deep cleaning
- Notes field for special observations
- Issue reporting option

REQ-W-008: Navigation Assistance

SCREENSHOT REFERENCES (UBER)

- *Integrated navigation map view*
- *Route display with ETA*
- *Turn-by-turn navigation interface*
- *Traffic status indicators*
- *"Navigate" button to open in Google/Apple Maps*
- Integrated GPS navigation
- Route optimization
- Real-time traffic updates
- Customer location pin accuracy
- Parking information display (if available)

5.2.4 Availability Management

REQ-W-009: Mid-Shift Logout Controls

- Logout attempt triggers:
 - **High Demand Period:**
 - Reason selection mandatory
 - Backend agent review
 - Permission granted/denied based on:
 - Number of pending bookings
 - Worker quota availability
 - Reason validity
 - Earnings impact notification
 - **Low Demand Period:**
 - Instant logout if no active/upcoming bookings
 - Simple confirmation required

REQ-W-010: Customer Notification on Logout

- Automatic notification to affected customers
- Alternative worker assignment initiation
- ETA update if applicable

5.2.5 Leave Management

- *Leave application form*
- *Calendar view for leave selection*
- *Leave balance/quota display*
- *Leave history with status (Approved/Pending/Rejected)*
- *Medical leave upload interface*

REQ-W-011: Leave Application System

- Leave quota: 2 leaves per month
- Advance leave application (minimum 24 hours notice)
- Leave approval workflow
- Calendar view of taken/remaining leaves
- Leave balance display

REQ-W-012: Additional Leave & Penalties

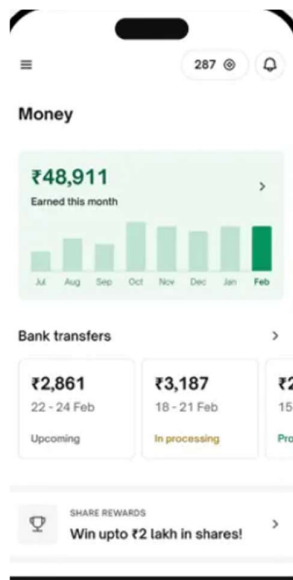

- Extra leave request during peak hours:
 - Penalty notification display
 - Penalty amount calculation
 - Confirmation requirement
- Medical leave exception:
 - Separate application category
 - Medical certificate upload
 - Admin review process
 - No penalty for genuine medical reasons

REQ-W-013: Leave Impact Management

- Automatic booking reassignment
- Customer notification about worker change
- Backup worker activation

5.2.6 Earnings & Payments

SCREENSHOT REFERENCE: (URBAN COMPANY)

- Earnings dashboard (daily/weekly/monthly toggle)
- Earnings breakdown by booking/trip
- Payment history with transaction details

- *Withdrawal/payout request screen*
- *Working hours tracker visualization*
- *Incentive/bonus display*

REQ-W-014: Earnings Dashboard

- Real-time earnings tracking:
 - Today's earnings
 - Weekly earnings
 - Monthly earnings
 - Pending settlements
- Earnings breakdown:
 - Per-booking earnings
 - Bonus/incentives
 - Deductions (if any)
 - Net earnings

REQ-W-015: Payment Schedule

- Weekly payment settlements
- Payment threshold: Minimum ₹500
- Payment methods:
 - Bank transfer
 - UPI
 - Digital wallet
- Payment history with transaction IDs

REQ-W-016: Working Hours Tracking

- Daily working hours requirement: 7 hours minimum
- Real-time hours counter
- Deficit alert system
- Earnings impact calculation for unfulfilled hours
- Automatic deduction for hour deficits

5.2.7 Worker Support

REQ-W-017: Help & Support

- Dedicated worker support helpline

- In-app chat support
- Issue reporting categories:
 - Payment issues
 - Customer disputes
 - Technical problems
 - Safety concerns
- Emergency assistance button

REQ-W-018: Training & Resources

- Service guidelines access
 - Video tutorials
 - Best practices documentation
 - Safety protocols
 - Customer interaction tips
-

5.3 Automated Backend System

5.3.1 Worker Assignment Algorithm

REQ-B-001: Primary Worker Assignment

- Assignment criteria priority:
 1. Customer preferences (for monthly subscriptions)
 2. Worker skills and specialization match
 3. Proximity to customer location (within 5km radius)
 4. Worker availability status
 5. Worker rating and performance history
 6. Current workload balance
- Assignment completion time: Within 2 minutes of booking

REQ-B-002: Backup Worker Assignment

- 2 backup workers assigned per booking
- Backup assignment criteria:
 - Same skill set as primary worker
 - Within 7km radius
 - Availability during booking window

- Automatic backup activation triggers:
 - Primary worker unavailability
 - Primary worker emergency logout
 - Primary worker running late (>15 minutes)

REQ-B-003: Worker Pool Management

- Maintain 2 backup workers per 10 active workers
- Dynamic pool adjustment based on:
 - Time of day
 - Day of week
 - Seasonal demand
 - Historical booking patterns
- Real-time worker capacity monitoring

5.3.2 Delay & Reassignment Management

REQ-B-004: Delay Detection

- Automatic tracking of:
 - Worker departure time
 - Estimated vs. actual travel time
 - Service start time deviation
- Delay threshold: 10 minutes beyond scheduled time

REQ-B-005: Delay Notification System

- Automatic customer notifications:
 - 5-minute delay alert
 - 10-minute delay with updated ETA
 - 15-minute delay with reassignment option
- Worker penalty calculation for repeated delays

REQ-B-006: Automatic Reassignment

- Triggers for reassignment:
 - Worker no-show (15+ minutes late)
 - Worker cancellation
 - Worker emergency
- Reassignment process:

1. Activate first backup worker
2. Send notification to customer
3. Update ETA
4. If first backup unavailable, activate second backup
5. If all backups unavailable, search available worker pool
 - Reassignment completion time: Within 5 minutes

5.3.3 Dynamic Capacity Management

REQ-B-007: Worker Quota Control

- Admin-controlled parameters:
 - Maximum concurrent bookings per worker
 - Maximum daily bookings per worker
 - Service-specific worker allocation
 - Peak hour capacity scaling
- Real-time quota adjustment interface

REQ-B-008: Demand Forecasting

- Historical data analysis for:
 - Peak booking hours
 - Seasonal trends
 - Geographic demand patterns
- Predictive worker allocation
- Proactive backup worker alerts

5.3.4 Quality Control

REQ-B-009: Performance Monitoring

- Automated tracking of:
 - On-time percentage
 - Customer ratings
 - Booking completion rate
 - Response time to assignments
- Threshold alerts for poor performance

REQ-B-010: Automated Actions

- Warning generation for:

- Ratings below 3.5 stars
 - Multiple late arrivals (3+ in a week)
 - Frequent cancellations (2+ in a week)
 - Temporary suspension triggers:
 - Persistent poor performance
 - Customer safety complaints
 - Violation of working hour requirements
-

5.4 Admin Control System

- *Dashboard with KPI cards and metrics*
- *Real-time booking/order feed*
- *Charts and graphs for performance tracking*
- *Worker/professional management table*
- *Geographic heatmap of service demand*

5.4.1 Dashboard & Analytics

REQ-A-001: Operations Dashboard

- Real-time metrics:
 - Active bookings count
 - Available workers count
 - Pending assignments
 - Revenue (daily/weekly/monthly)
 - Customer acquisition
 - Worker utilization rate
- Geographic heatmap of demand
- Service category breakdown

REQ-A-002: Worker Management

- Worker database with filters:
 - Availability status
 - Performance rating
 - Specialization
 - Location

- Individual worker profiles
- Performance history
- Earnings reports
- Disciplinary records

REQ-A-003: Customer Management

- Customer database
- Booking history
- Complaint history
- Subscription status
- Payment history
- Loyalty tier management

5.4.2 Configuration Management

REQ-A-004: Pricing Management

- Service pricing configuration:
 - Base rates per service
 - Overtime rates
 - Peak hour multipliers
 - Discount management
- Dynamic pricing rules
- Promotional pricing

REQ-A-005: Worker Capacity Controls

- Set maximum concurrent bookings
- Adjust backup worker ratios
- Define service area boundaries
- Manage worker assignment rules

REQ-A-006: Leave & Penalty Management

- Review medical leave applications
- Approve/deny additional leave requests
- Penalty amount configuration
- Exception management

5.4.3 Support & Resolution

REQ-A-007: Dispute Management

- Customer complaints queue
- Worker grievances queue
- Dispute resolution workflow
- Communication logs
- Refund processing

REQ-A-008: Emergency Handling

- SOS alert dashboard
 - Emergency response protocols
 - Incident logging
 - Follow-up tracking
-

6. Non-Functional Requirements

6.1 Performance Requirements

NFR-P-001: Response Time

- App launch time: < 3 seconds
- Page load time: < 2 seconds
- API response time: < 1 second for 95% of requests
- Search results: < 1 second
- Payment processing: < 5 seconds

NFR-P-002: Scalability

- Support minimum 10,000 concurrent users
- Handle 100,000+ bookings per day
- Database scalability for 1 million+ records
- Auto-scaling capability for peak loads

NFR-P-003: Availability

- System uptime: 99.9% (maximum 43 minutes downtime per month)
- Scheduled maintenance windows: Off-peak hours only
- Disaster recovery plan with < 4-hour recovery time

6.2 Security Requirements

NFR-S-001: Data Encryption

- End-to-end encryption for all sensitive data
- TLS 1.3 for data in transit
- AES-256 encryption for data at rest
- Secure storage of payment information (PCI-DSS compliance)

NFR-S-002: Authentication & Authorization

- Multi-factor authentication (MFA) for admin users
- OTP-based login for customers and workers
- Biometric authentication support (fingerprint/face ID)
- Session timeout: 30 minutes of inactivity
- JWT-based token authentication

NFR-S-003: Privacy & Data Protection

- GDPR compliance for data handling
- Customer data anonymization for workers (limited information access)
- Right to data deletion (account removal)
- Consent management for notifications and data usage
- Regular security audits (quarterly)

NFR-S-004: Payment Security

- PCI-DSS Level 1 compliance
- No storage of complete card details
- Tokenization of payment information
- 3D Secure authentication for card payments
- Fraud detection mechanisms

6.3 Usability Requirements

NFR-U-001: User Interface

- Intuitive navigation (maximum 3 taps to any feature)
- Consistent design language across platforms
- Accessibility compliance (WCAG 2.1 Level AA)
- Support for screen readers
- Minimum font size: 14px
- High contrast mode option

NFR-U-002: Multi-language Support

- Primary: English, Hindi
- Regional languages: Based on geographic expansion
- Right-to-left (RTL) support where applicable
- Language selection on first launch

NFR-U-003: Device Compatibility

- iOS: Version 13.0 and above
- Android: Version 8.0 (API level 26) and above
- Responsive design for tablets
- Adaptive layouts for different screen sizes

6.4 Reliability Requirements

NFR-R-001: Error Handling

- Graceful degradation on network failures
- Offline mode with data sync when connection restored
- Clear error messages with resolution steps
- Automatic retry mechanism for failed operations

NFR-R-002: Data Integrity

- Transaction atomicity (all-or-nothing operations)
- Data validation on both client and server
- Regular database backups (hourly incremental, daily full)
- Backup retention: 30 days minimum

NFR-R-003: Fault Tolerance

- No single point of failure in architecture
- Load balancing across multiple servers
- Database replication and failover
- Circuit breaker pattern for external service calls

6.5 Maintainability Requirements

NFR-M-001: Code Quality

- Code coverage: Minimum 80%
- Adherence to coding standards (language-specific style guides)
- Comprehensive API documentation
- Inline code comments for complex logic

NFR-M-002: Monitoring & Logging

- Application performance monitoring (APM)
- Real-time error tracking
- User activity logging (anonymized)
- System health dashboards
- Log retention: 90 days

NFR-M-003: Version Control

- Semantic versioning (MAJOR.MINOR.PATCH)
- Backward compatibility for APIs (minimum 2 versions)
- Deprecation notices (30 days before removal)
- Release notes for all updates

6.6 Compliance Requirements

NFR-C-001: Legal Compliance

- Terms of Service (ToS) and Privacy Policy
- GDPR compliance for European users (if applicable)
- Data localization as per local regulations
- Labor law compliance for worker management
- Tax compliance for payment processing

NFR-C-002: Industry Standards

- ISO 27001 for information security
- OWASP Top 10 security guidelines
- SOC 2 Type II compliance
- API security best practices (OAuth 2.0)

7. User Interface Requirements

- *Color scheme and branding*
- *Typography and font choices*
- *Icon set and visual style*
- *Bottom navigation bar design*
- *Dark mode vs light mode comparison*

7.1 Design Principles

UI-001: Consistent Design Language

- Material Design (Android) and Human Interface Guidelines (iOS)
- Consistent color scheme, typography, and iconography
- Brand identity integration
- Dark mode support

UI-002: User-Centric Design

- Task-oriented interface (minimal steps to complete actions)
- Progressive disclosure (show relevant info at each step)
- Clear call-to-action buttons
- Contextual help and tooltips

7.2 Navigation Structure (for reference, subject to adjustments)

UI-003: Customer App Navigation

- Bottom navigation bar:
 - Home (booking dashboard)
 - Services (service catalog)
 - Bookings (current/upcoming)
 - Profile (settings, payment methods)
- Top navigation: Notifications, Help

UI-004: Worker App Navigation

- Bottom navigation bar:
 - Dashboard (current tasks)
 - Schedule (upcoming assignments)
 - Earnings (revenue tracking)
 - Profile (availability, settings)

7.3 Key Screens (Customer App)

- *Home screen layout with service categories*
- *Promotional banners placement*
- *Current booking status card*
- *Quick action buttons*

UI-005: Home Screen

- Quick service access
- Current booking status (if active)
- Upcoming booking preview
- Service recommendations
- Banner for promotions

UI-006: Service Selection Screen

- *Service category grid/list layout*
- *Service card design with image, title, price, rating*
- *Service description expandable sections*
- *"Add to Cart" or "Book Now" button placement*
- Service categories with icons
- Brief service descriptions
- Pricing information
- "Book Now" CTA

UI-007: Booking Configuration Screen

- *Date and time picker UI*
- *Duration selector (slider or dropdown)*
- *Address selection/confirmation*
- *Price breakdown preview card*
- *Special instructions text area*
- *Booking summary before confirmation*
- Date and time picker
- Duration selector
- Preference options
- Price calculation preview
- "Confirm Booking" CTA

UI-008: Active Booking Screen

- *Worker profile card with contact options*
- *Service timer/countdown display*

- *"Scan QR Code" button prominently placed*
- *Chat bubble icon for messaging*
- *Emergency/Help button*
- Worker information card
- Live tracking map
- QR code scanner button
- Chat/call worker options
- Timer display
- "End Service" button

7.4 Key Screens (Worker App)

- *Worker dashboard home screen*
- *Online/Offline toggle (large and prominent)*
- *Today's earnings card*
- *Current task/booking card if active*
- *Upcoming tasks preview*
- *Navigation to different sections*

UI-009: Dashboard Screen

- Availability toggle (prominent)
- Current task card (if active)
- Today's earnings summary
- Working hours progress bar
- Quick navigation to upcoming tasks

UI-010: Task Detail Screen

- *Task/order detail card layout*
- *Customer address with map preview*
- *Navigate button integration*
- *Service type and duration display*
- *Earnings for this task highlighted*
- *Start/Complete service action buttons*
- Customer location and navigation
- Service details

- Estimated earnings
- QR code display
- Start/End service buttons
- Photo upload option

UI-011: Earnings Screen

- *Earnings summary with time period filters*
- *Graphical representation (bar/line charts) of earnings*
- *Detailed transaction list/history*
- *Pending vs settled amounts*
- *Withdraw/payout button*
- *Breakdown by booking type*
- Earnings summary (daily/weekly/monthly)
- Breakdown by booking
- Payment history
- Pending settlements
- Withdrawal option

8. Security and Compliance

8.1 Authentication & Authorization

SEC-001: User Authentication

- OTP-based mobile number verification
- Email verification for secondary contact
- Social login options (Google, Facebook) - optional
- Session management with secure tokens

SEC-002: Role-Based Access Control (RBAC)

- Customer role permissions
- Worker role permissions
- Admin role hierarchy (super admin, operations, support)
- API endpoint authorization

8.2 Data Security

SEC-003: Personal Data Protection

- Encryption of PII (Personally Identifiable Information)
- Limited worker access to customer data:
 - First name only
 - Service address
 - Contact number (masked until booking confirmation)
 - No access to payment information
- Customer data retention policy: As per GDPR/local regulations

SEC-004: Payment Data Security

- PCI-DSS compliance
- No storage of CVV/card details
- Payment tokenization
- Secure payment gateway redirect

SEC-005: Secure Communication

- HTTPS for all API calls
- Certificate pinning in mobile apps
- Secure WebSocket connections (WSS)

8.3 Application Security

SEC-006: Input Validation

- Server-side validation for all inputs
- SQL injection prevention
- XSS (Cross-Site Scripting) prevention
- CSRF (Cross-Site Request Forgery) protection
- File upload restrictions and validation

SEC-007: API Security

- Rate limiting to prevent abuse
- API key rotation
- Request signing for sensitive operations
- IP whitelisting for admin APIs

8.4 Compliance Requirements

SEC-008: Regulatory Compliance

- **GDPR Compliance** (if operating in EU):
 - Right to access data
 - Right to deletion
 - Data portability
 - Consent management
- **Data Localization:** Store data as per local regulations
- **Labor Laws:** Compliance with gig worker regulations
- **Tax Compliance:** TDS, GST handling for Indian operations

SEC-009: Privacy Policy & Terms

- Clear privacy policy disclosure
 - Terms of service acceptance
 - Cookie policy (if applicable)
 - Data sharing transparency
 - User consent for data collection
-

9. Constraints and Assumptions

9.1 Technical Constraints

CONST-001: Platform Limitations

- Mobile-first approach (no web app in Phase 1)
- Requires stable internet connection for core features
- GPS/location services must be enabled
- Minimum device specifications for smooth operation

CONST-002: Third-Party Dependencies

- Reliance on payment gateway uptime
- Google Maps API quotas and costs
- SMS/WhatsApp delivery rates
- Notification service availability

CONST-003: Geographic Constraints

- Initial launch: Specific cities/regions only

- Service area defined by admin-set boundaries
- Worker assignment within defined radius

9.2 Business Constraints

CONST-004: Operational Constraints

- Worker availability determines service capacity
- Backup worker requirement affects operational costs
- Minimum worker pool size per service area
- Peak hour capacity limitations

CONST-005: Regulatory Constraints

- Compliance with local labor laws
- Tax regulations for gig workers
- Background verification requirements
- Insurance requirements for workers

9.3 Assumptions

ASSUM-001: User Assumptions

- Users have smartphones with internet connectivity
- Users are comfortable with digital payments
- Users can scan QR codes
- Basic digital literacy among workers

ASSUM-002: Business Assumptions

- Adequate worker supply in service areas
- Market demand for on-demand services
- Competitive pricing acceptance
- Customer willingness to use app-based services

ASSUM-003: Technical Assumptions

- Cloud infrastructure availability
 - Third-party service reliability
 - Network connectivity in service areas
 - Device compatibility with latest OS versions
-

10. Success Criteria

10.1 Functional Success Metrics

SUCCESS-F-001: Booking Metrics

- Booking completion rate: > 95%
- Average booking time: < 3 minutes
- Successful payment rate: > 98%
- Cancellation rate: < 5%

SUCCESS-F-002: Worker Assignment Metrics

- Assignment time: < 2 minutes
- Reassignment rate: < 3%
- Worker on-time arrival: > 90%
- Backup activation rate: < 5%

SUCCESS-F-003: Quality Metrics

- Average customer rating: > 4.2/5
- Average worker rating: > 4.0/5
- Dispute resolution time: < 48 hours
- Customer retention rate: > 70%

10.2 Technical Success Metrics

SUCCESS-T-001: Performance Metrics

- App crash rate: < 0.1%
- API response time (p95): < 1 second
- System uptime: > 99.9%
- Page load time: < 2 seconds

SUCCESS-T-002: Engagement Metrics

- Daily active users (DAU)
- Monthly active users (MAU)
- Session duration
- Feature adoption rates

10.3 Business Success Metrics

SUCCESS-B-001: Revenue Metrics

- Gross merchandise value (GMV)
- Revenue per booking
- Subscription conversion rate: > 30%
- Month-over-month growth: > 15%

SUCCESS-B-002: Customer Metrics

- Customer acquisition cost (CAC)
- Customer lifetime value (CLV)
- Net promoter score (NPS): > 50
- Repeat booking rate: > 60%

SUCCESS-B-003: Operational Metrics

- Worker utilization rate: > 70%
- Average earnings per worker
- Worker retention rate: > 80%
- Support ticket resolution rate: > 95%

11. Appendices

Appendix A: Glossary

- **Insta Maid:** On-demand maid service with immediate or same-day booking
- **Monthly Maid:** Subscription-based recurring maid service
- **Deep Cleaning:** Intensive cleaning service for entire home or specific areas
- **QR Code Verification:** Scanning system to start/end service and track time
- **Backup Worker:** Standby worker assigned to handle primary worker unavailability
- **Service Area:** Geographic boundary within which services are offered
- **Peak Hours:** High-demand time periods (typically mornings and evenings)
- **Buffer Period:** 5-minute grace period before overtime charges apply
- **Worker Pool:** Available workers in a specific service area
- **SLA:** Service Level Agreement - guaranteed performance standards

Appendix B: User Stories

Customer User Stories:

1. As a customer, I want to book a maid service for tomorrow morning so that my house is clean before guests arrive.

2. As a customer, I want to set up a monthly subscription for regular cleaning so that I don't have to book manually every time.
3. As a customer, I want to track my assigned worker's location so that I know when they will arrive.
4. As a customer, I want to scan a QR code to start the service so that billing is accurate based on actual work time.
5. As a customer, I want to cancel or reschedule my booking without penalty if I do it 1 hour in advance.
6. As a customer, I want to rate and review the service so that I can share my experience and help others.

Worker User Stories:

1. As a worker, I want to toggle my availability status so that I only receive assignments when I'm ready to work.
2. As a worker, I want to see my upcoming assignments so that I can plan my day effectively.
3. As a worker, I want to navigate to the customer's location so that I can reach on time.
4. As a worker, I want to see my daily and monthly earnings so that I can track my income.
5. As a worker, I want to apply for leave in advance so that I can manage personal commitments.
6. As a worker, I want to upload photos of completed work so that I can demonstrate service quality.

Admin User Stories:

1. As an admin, I want to monitor real-time bookings so that I can ensure smooth operations.
2. As an admin, I want to adjust worker capacity settings so that I can optimize resource allocation.
3. As an admin, I want to review and resolve customer complaints so that I can maintain service quality.
4. As an admin, I want to analyze performance metrics so that I can make data-driven decisions.

Appendix C: Risk Analysis

High-Priority Risks:

Risk	Impact	Probability	Mitigation Strategy
Worker shortage during peak hours	High	Medium	Maintain adequate backup worker pool; dynamic pricing
Payment gateway downtime	High	Low	Multiple gateway integration; fallback options

Risk	Impact	Probability	Mitigation Strategy
Customer data breach	High	Low	Robust security measures; regular audits
Poor customer experience due to unreliable workers	High	Medium	Strict quality controls; worker training; rating system

Medium-Priority Risks:

Risk	Impact	Probability	Mitigation Strategy
GPS/location inaccuracy	Medium	Medium	Multiple location providers; manual address entry
App performance issues on older devices	Medium	Medium	Optimize code; progressive enhancement
High customer acquisition cost	Medium	High	Referral programs; organic growth strategies

Document Approval

Quick Reference: Key Requirements Summary

Customer App Must-Haves: ✓ Service booking with Insta/Monthly/Deep Cleaning options ✓ QR code scanning for service start/end ✓ Real-time worker tracking ✓ Payment integration with multiple options ✓ Booking management (view, cancel, reschedule) ✓ Rating and review system ✓ Multi-channel notifications ✓ Customer support and SOS features

Worker App Must-Haves: ✓ Availability toggle ✓ Task dashboard (current, upcoming, completed) ✓ QR code generation for verification ✓ Earnings tracking and payment management ✓ Navigation to customer location ✓ 7-hour daily work requirement tracking ✓ Leave management (2 leaves/month) ✓ Photo upload for work documentation

Backend System Must-Haves: ✓ Automated worker assignment algorithm ✓ 2 backup workers per 10 active workers ✓ Automatic reassignment on delays/unavailability ✓ Dynamic worker capacity management ✓ Performance monitoring and quality control ✓ Admin dashboard with real-time metrics

Critical Technical Requirements: ✓ 99.9% uptime ✓ < 1 second API response time ✓ PCI-DSS compliant payment processing ✓ End-to-end encryption for sensitive data ✓ Multi-platform support (iOS, Android) ✓ Comprehensive logging and monitoring
